

The rule for trading the thin profile is that **you should never fight the trend**, as this shape appears during explosive, fast-moving trends—often driven by news—where price moves too quickly for large players to build up their positions 1.

Instead of going against the momentum, your strategy should be to **look for small volume clusters within the thin profile** 1. These clusters are crucial because they pinpoint the exact locations where buyers or sellers were aggressively adding to their positions 1. For example, if you are looking at a bullish thin profile, **these small volume clusters act as your support levels** that you can trade from during market pullbacks 1.
